

# The Complete Book on Biomass Based Products (Biochemicals, Biofuels, Activated Carbon)

**Author:** NPCS Board of Consultants & Engineers

**Format:** Hardcover

**ISBN:** 9788178331584

**Code:** NI289

**Pages:** 417

**Price:** Rs. 1,575.00 **US\$** 150.00

**Publisher:** Asia Pacific Business Press Inc.

Usually ships within 5 days

Biomass use is growing globally. Biomass is biological material derived from living, or recently living organisms. It most often refers to plants or plant-based materials which are specifically called lignocellulosic biomass. Biomass (organic matter that can be converted into energy) may include food crops, crops for energy, crop residues, wood waste and byproducts, and animal manure. It is one of the most plentiful and well-utilized sources of renewable energy in the world. Broadly speaking, it is organic material produced by the photosynthesis of light. The chemical materials (organic compounds of carbons) are stored and can then be used to generate energy. The most common biomass used for energy is wood from trees. Wood has been used by humans for producing energy for heating and cooking for a very long time.

As an energy source, biomass can either be used directly via combustion to produce heat, or indirectly after converting it to various forms of biofuel. Conversion of biomass to biofuel can be achieved by different methods which are broadly classified into: thermal, chemical, and biochemical methods. Biomass gasification is the conversion of solid fuels like wood and agricultural residues into a combustible gas mixture. The gasification system basically consists of a gasifier unit, a purification system and energy converters- burner or engine.

This book offers comprehensive coverage of the design and analysis of biomass gasification, the key technology enabling the production of biofuels from all viable sources like sugar beet and sweet sorghum. It aims at creating an understanding of the nature of biomass resources for energy and fuels, the variety of processes that are available for conversion of the wastes into energy or fuels. The book discusses the overview of the Biomass Energy along with their Properties, Composition, Benefits, Characteristics and Manufacturing Process of Biomass based products. Also it contains suppliers contact details of plant & machinery with their photographs.

The content includes biomass renewable energy, prospective renewable resources for bio-based processes, biochemical from biomass, biomass based chemicals, biofuel production from biomass crops, biomass gasification, reuse of bio-genic iron oxides and woody biomass fly ash in cement based materials and agricultural areas, biofuel briquettes from biomass, biomass based activated carbon, environmental aspects.

It will be a standard reference book for Professionals, Decision-makers, Engineers, those studying and researching in this important area and others interested in the field of biomass based products. Professionals in academia and industry will appreciate this comprehensive and practical reference book, due to its multidisciplinary nature.

## Contents

### 1. BIOMASS RENEWABLE ENERGY

Introduction  
Types of Biomass  
Lignocellulosic Biomass  
Crops and Vegetables  
Waste Biomass  
Properties of Biomass  
Physical Properties  
Densities  
True Density  
Apparent Density  
Bulk Density  
Thermodynamic Properties  
(a) Thermal Conductivity  
(b) Specific Heat  
(c) Heat of Formation  
(d) Heat of Combustion (Reaction)  
(e) Heating Value  
(f) Ignition Temperature  
Important Constituents of Lignocellulosic Feedstocks  
Benefits of Biomass  
Disadvantages of Biomass  
Biomass Pyramids  
Compaction Characteristics of Biomass and Their Significance  
Effect of Particle Size  
Effect of Moisture  
Effect of Temperature of Biomass  
Effect of Temperature of the Die  
Effect of External Additives  
Unit Operations  
Anaerobic Digestion  
Biomass Energy in India

### 2. PROSPECTIVE RENEWABLE RESOURCE FOR BIO-BASED PROCESSES

Waste Biomass  
Types of Waste Biomass  
Lignocellulose  
Lignocellulose Composition  
Cellulose  
Hemicellulose  
Lignin  
Residual Biomasses and the Biorefinery Associated Concept  
Bio-Based Processes  
Value Addition of Waste Biomass  
Biotransformation of Biomass

Transformation of Marine Process Wastes  
Biotransformation of Biotechnological Process Wastes  
Biochemical Extraction from Biomass  
3. BIOCHEMICAL FROM BIOMASS  
Biomass Conversion  
Thermo Chemical Conversion  
(a) Combustion  
Gasification  
Pyrolysis  
Biochemical Conversion  
Fermentation  
Anaerobic Digestion  
Mechanical Extraction  
Biochemical from Biomass  
Biomethanation  
Feature of Biomethanation  
Mechanism of Biomethanation  
Current Status  
Ethanol Fermentation  
Ethanol Fermentation of Saccharine Materials  
Ethanol Fermentation of Starch  
Ethanol Fermentation of Lignocellulosics  
(a) Concentrated Sulfuric Acid Process  
(b) Dilute Sulfuric Acid Process  
Acetone-Butanol Fermentation  
Characteristics of Acetone-Butanol Fermentation  
Reactions of Acetone-Butanol Fermentation  
Energy Efficiency of Acetone-Butanol Fermentation  
Products of Acetone-Butanol Fermentation  
Hydrogen Fermentation  
Characteristics of Hydrogen Fermentation  
Reactions of Hydrogen Fermentation  
Energy Efficiency of Hydrogen Fermentation  
Products of Hydrogen Fermentation  
Lactic Acid Fermentation  
Lactic Acid Bacteria  
Biomass Resources for Lactic Acid Fermentation  
Utilization of Unused Biomass from Palm Oil Industry  
Lactic Acid Fermentation from Kitchen Garbage  
Purification of Lactic Acid  
Silage  
Silage Making  
Silage Fermentation  
Roll Bale Silage  
Composting  
Basic Principles of Composting  
Basic Elements of Composting  
(a) Preprocessing  
(b) Fermentation  
(c) Product Forming Process  
Current Composting Technology  
4. BIOMASS BASED CHEMICALS  
Chemicals from Biomass as Feedstock

Biomass Conversion Chemicals

Methane

Methanol

Production of Methanol from Biomass

Uses and Applications of Methanol

Waste Water Treatment

Environmentally Friendly

Chemical Intermediate and Fuel

Safety in Automotive Fuels

Government Policy

Other Applications

Ethanol

Properties of Ethanol

Ethanol Production Process from Sugarcane

Cleaning of Sugarcane, Extraction of Sugars and Juice Treatment

Juice Concentration and Sterilization

Fermentation

Distillation and Dehydration

Acetic Acid

Ethylene

Glycerol

Production of Glycerol

Applications of Glycerol

Lactic Acid

Propylene Glycol

1,3-Propanediol

Acetone

Uses of Acetone

Production of Acetone

Butanol

Butanol Fermentation Process

Advantages of Biobutanol

Succinic Acid

Aspartic Acid

Levulinic Acid

Itaconic Acid

Xylitol

2,5-furandicarboxylic Acid

Sorbitol

Uses of Sorbitol

## 5. BIOFUEL PRODUCTION FROM BIOMASS CROPS

Biomass Production

Introduction

The Holistic Approach

Pretreatment of Lignocellulosic Biomass to Biofuel

Bioethanol from Sugar Beet

Biological Hydrogen from Sweet Sorghum

Few Crops and Their Residues

Arhar

Bajra

Banana

Barley

Coconut

Coffee  
Coriander  
Cotton  
Dry Chilly  
Dry Ginger  
Green Gram  
Ground Nut  
Jowar  
Maize  
Mango  
Masoor  
Moong  
Moth  
Mustard  
Potato  
Soyabean  
Sugarcane  
Tea

## 6. BIOMASS GASIFICATION

Gasification Reactor Types

Moving Bed (Fixed Bed)

Down-draft Gasifiers

Up-draft Gasifier

Fluidized Bed Gasifier

Bubbling Fluidized Bed

Circulating Fluidized Bed Gasifier

Entrained-Flow Reactor

Gasification Reactions and Steps

Gasifying Medium

Chemical Reactions

1. Reactions with Molecular Oxygen

2. Reactions with Carbon Dioxide

3. Reactions with Steam

4. Reactions with Hydrogen

Fuel-Gas Production and Utilization

Synthesis Gas Production

The Gasification Process

Drying

Pyrolysis

Char Gasification Reactions

Speed of Char Reactions

Boudouard Reaction

Water–Gas Reaction

Shift Reaction

Hydrogasification Reaction

Char Combustion Reactions

Catalytic Gasification

Catalyst Selection Criteria

Advantages and Limitations

Advantages

Limitations

Generation of Thermal Energy from Wood through Biomass Gasification System

Scope of Supply

Equipment Description

Appendix & Annexure

## 7. REUSE OF BIO-GENIC IRON OXIDES AND WOODY BIOMASS FLY ASH IN CEMENT BASED MATERIALS AND AGRICULTURAL AREAS

Introduction

Materials and Methods

Preparation of Hardened Cement Paste Specimens

Monolith Leaching Test

Characterization of WBFA

Leaching Behavior of Blended Cement Pastes

## 8. BIOFUEL BRIQUETTES FROM BIOMASS

Properties of Biomass Briquettes

Uses and Applications of Briquette

Feedstock

Market

Pre-processing of Biomass Residues

Bio-briquette Manufacturing Process

Advantages of Biomass Briquetting

Comparative Characteristics of Bio Briquettes

Briquetting Plant

## 9. BIOMASS BASED ACTIVATED CARBON

Introduction

Biomass Pyrolysis and Char Activation

Biomass Properties

Lab-Scale Pyrolysis

Lab-scale Activation

Activation Results

Pore Size Distribution

Generation of Granular Activated Carbon

Rotary Kiln Reactor for Char Activation

Composition of Biological Activated Carbon Process

Composition and Application

Basic Principles of Biological Activated Carbon Technology

Application Fields and the Typical Process Flow of Biological Activated Carbon Technology

Basic Operational Parameters of BAC Process

O<sub>3</sub>-BAC Process and the Evaluation of Ozonation

Mechanism and Characteristics of O<sub>3</sub>-BAC Process

Effect of Ozonation on Molecule Weight Distribution and the Molecule Structure of Organic Matters

Effect of Ozonation on Molecule Weight Distribution of Organic Matters

Effect of Ozonation on the Structure of Organic Matters

Improvement of Biochemical Properties of Organics by Ozonation

Improvement of Ozonation on Biodegradability of Organic Matters

## 10. ENVIRONMENTAL ASPECTS

Impacts of Woody Biomass Harvest

Soil Resources

Forest Health

Wildlife

Water Quality and Fisheries

Environmental Impacts of Biofuels

Ethanol

Biodiesel

## 11. PLANT & MACHINERY PHOTOGRAPHS

## 12. ADDRESSES OF PLANT AND MACHINERY SUPPLIERS

# About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
